About Me

Summary

I'm an experienced .NET web application developer, who has been working in several enterprise applications since 2015, with a fine knowledge of Database Design, Design Pattern, Object-Oriented Programming.

I have a solid experience in ASP.NET Web Form and ASP.NET MVC technologies, as well as JavaScript, TypeScripts, Twitter Bootstrap, Materialize CSS and responsive web design. I also have knowledge about distributed programming with WCF, Web APIs and efficient development modal like Agile - Scrum. My English skill is fluent with IELTS 6.0, certificated since April 2016.

Beside Full-Stack web developer role, I've also been a Team Leader and Scrum Master.

I like to help and learn from other members, good in teamwork and communication. I am also eager to learn and tend to work well within a group.

Employment History – Work Experiences

Ascentis	
Position: Scrum Master / Full Stack Developer	
Duration: March 2020 - Present	
Company: Ascentis	
Team Size: Multiple Teams, 2 to 7 members each team	
Description	Ascentis is one of the top companies that specialize in providing CRM – CMS solution integrated with Ecommerce. The company has a vast amount of clients in the eCommerce industry. I've been working for Ascentis since March 2020. From March 2020 until November 2021 was working for Ascentis under CMC Global. From November 2021 to present, I've been working directly with Ascentis.
Responsibilities	I have a chance to work on multiple projects for multiple clients. Most of my time here I was designated to the BAU team. The purpose of this team is to maintain and execute the change requests for the large amount of projects from the clients of Ascentis. I was the Full-Stack web developer and Scrum Master for this team. During my time here, my responsibilities are:

	- Step by step, sprint by sprint, to build the Scrum process for the team, so that the process is there to help the team working effectively, not blocking their way - Make sure the process is reasonable and well adapted by other team members - Make sure all members understand the process and comfortable while following that process - Make sure the team is proactive in getting advise / explanation about the task assigned - Helping team members to resolve blockers - Code review - Fix bugs, implement updates or change request - Deploy to UAT to verify, request for deployment on Production and verify - Working with BA, developers, PO and testers from other teams, make sure the changes are implemented correctly as the requirements and work smoothly, not break any other business after released
Project Technologies	Asp.NET Web Form Asp.NET MVC .NET Core / .NET 6 HTML, CSS, SCSS, JQuery, JavaScript, TypeScript ReactJS Team Foundation Server (TFS) with CI/CD SQL Server PostgreSQL Hangfire Orchard Core

A Startup for E-Commerce and payment solutions	
Position: Team Lead / Full Stack Developer Duration: August 2019 – March 2020 Company: ITE Team Size: 8 members	
Description	The company is a startup company, focused on building product applications, with the business domain is about handling the payment process for e-commerce websites. The company's business strategy is to aim to the e-commerce enterprises those in need of integrating online payment methods. During my short time working here, I was both a team leader and the main front-end developer. I was also working on multiple projects at a time. I have gone through three projects here, which are: - a Landing Page working as a gateway to routing customer to the payment gateway of the payment type they choose - an Admin Management System that allows the administrators to manage the customers' information, their transactions, the sales information, … They are all built using Angular 8, Angular Material and some other libraries for front-end, and .Netcore Web API / Java Web API for the back-end.
Responsibilities	My responsibilities and what I have done during the time I worked here are: - Help BA to design mockup UI - Help BA to clarify and build requirements - Design working process for everybody - Design business flow and user behavior for the products - Involved in the process of design and improve API - Main front-end developer - Mentor new members - Support other members - Review code - Build and set up servers for the products - Merge code and deploy products to servers
Project Technologies	Angular 8 Angular Material Twitter Bootstrap Entities Framework NGINX .Net Core web API

	Microsoft SQL Server JAVA MySQL

Top UK's Recruiter Company - Reed	
Position: Full stack developer Duration: June 2018 – August 2019 Company: Harveynash Viet Nam Team Size: 22 members	
Description	For a long time, since 1995, the company has been the best recruiter platform in the United Kingdom. Now they are still one of the best. The company provides a service that connects both the recruiters and the people looking for a job in the most efficient way. Have been running for a long time, the old service is no longer catch up with the latest technologies and the latest business domains, therefore no longer able to provide the best service for their customers. A development team is founded to help improve the company's service to be more efficient and able to match with the latest requirements of the new era. The new development team has 20+ members with 2 sub-teams: - Recruiter: handing the business for the recruiter to find proper, relevant and suitable candidates - Jobseeker: handing the business that allows the people to find the correct jobs and companies that they are looking for
Responsibilities	As one of the experienced developers with fluent English communication skills, I was put into the Jobseeker team to handle the core business domain directly with the customer. - Communicate with the customer to get clear requirements - Breakdown customer's requirements to tickets and sub-tasks - Refinement and planning for sprints - Update code according to the ticket's requirements, for the tickets which are assigned to me - Help and support other team members for their tickets, and for communication with the customer - Perform unit testing - Frequently reviewing tickets are done by other team members
